

# Enterprise Document Translation (ETH Replacement) for 135 languages App Now available on the Google Cloud MarketPlace

## Empowering Government agencies with AI Translation to streamline operations and improve equity of information access

In collaboration with Google Public Sector, Acumen Velocity introduces the Acumen Translation Hub—an innovative, AI-powered solution designed to streamline large-scale document translation workflows and improve equitable access to information.

### Key Features:

- ✓ **Enterprise-Level Translation Across 135 Languages:** The Acumen Translation Hub automates document handling, voice translation, and application localization, all powered by Google Cloud.
- ✓ **Seamless Workflow Automation:** Features such as team-based routing, human-in-the-loop editing, and post-editing enable a user-driven experience, requiring no technical expertise.
- ✓ **Multi-Format Capabilities:** Our platform supports various translation needs, including documents, speech-to-text, text-to-speech, and data entry forms.

### Addressing the Challenges:

Language barriers often make accessing public information a cumbersome process. Navigating through complex documentation or application procedures can be time-consuming, expensive, and inconclusive, especially for individuals unfamiliar with the language. Our solution addresses these challenges by:

- ✓ **Providing Equal Access to Information:** Enabling individuals to access critical program information in the language they understand, enhancing the citizen experience.
- ✓ **Streamlining Coordination and Workflow:** Reducing the need for multiple agency interactions and interpreter services, leading to more efficient and cost-effective processes.

### Addressing access and equity.

#### AI-powered solutions

Acumen's AI technology is created on Google Cloud and can provide information access in the language that demographics are most familiar with to improve citizen experience.

#### Team based routing

Acumen products include a seamless workflow and team based approach for your translation with features such as post editing, human in the loop, speech to text and text to speech as well as application and data entry forms translation

#### Data-driven insights

Acumen's data analytics capabilities can empower government agencies to identify high-risk populations and tailor outreach efforts for better program management

#### Document & Voice workflow solutions

Acumen's AI document workflow solutions can automate manual and human error prone document processing along with voice enabled AI solutions

#### Learning Platform

Acumen's learning platform can provide learning courses available in multiple languages
